Combining efficient process with effective automation tools, Pirean and IBM can help organisations of every size lower the cost of managing the enterprise, meet changing demands in service and increase operational intelligence.

Our simple, but effective approach is captured in three words:

Control

- Automatically assert control over asset information, system configuration and installed software on the systems in your environment, laying the building blocks of a company wide Configuration Management Database (CMDB)
- Enable centralised control of software updates and fixes, accessible across the organisation and to end-users and workgroups beyond geographical boundaries
- Understand the level of exposure within the business in terms of critical fixes and security patches. Establish the foundations for regulatory compliance and corporate governance through centralised intelligence and reporting

Align

- Guarantee systems are patched according to security policy and that the correct applications are installed on the correct systems
- Ensure that the configuration of servers and workstations is aligned with security policy and system role requirements
- Automatically monitor and control software licenses and their allocations, and remove unlicensed or extraneous software

Optimise

- Introduce streamlined processes for managing the assets and configuration of the systems in your environment
- Release staff to focus on strategic projects by automating control of updates and fixes
- Introduce 'Desired State' management, defining from a central resource how a workstation or server should be configured, and automatically managing their compliance

Pirean, in partnership with IBM, deliver scalable and affordable solutions to enable you to Control, Align and Optimise the management of your IT environment.

About Pirean

Pirean are acknowledged industry leaders in the delivery of enterprise solutions for business opportunity and business service excellence. We deliver effective strategies and technologies to power organisations and e-business.

Pirean deliver recognised expertise in Quality Management, Information Security Management and IT Service Management through services benchmarked to ISO 9001, ISO 27001 and ISO 20000 Standards.

As IBM Premier Business Partners, Pirean offer particular expertise in the delivery of IBM Tivoli, DB2, WebSphere and Express solutions for IT Service Management, Security Management and Service Oriented Architectures.

We deliver the right combination of skills and services to unlock your business potential and maintain the highest return on your IT investment.

To learn more about Pirean visit www.pirean.com or call +44 (0)845 226 0542

Approaching the challenges from an ITIL Service Management perspective, Pirean and IBM solutions deliver benefits to departments beyond the normal IT support infrastructure.

Together, we will help you to realise a central source from which to:

- Identify and track the location, configuration and status of servers and workstations
- Automatically control changes specific to a machine or enterprise-wide, and manage their impact
- Identify and resolve security vulnerabilities
- Identify installed software and control future deployments
- Manage licences and remove unauthorised software
- Maintain accurate reports on the IT estate and configure systems to best practice, corporate governance and regulatory compliance

With solutions for businesses of every scale, deployed across the entire organisation or within a specific workgroup or department, we introduce the Express and Enterprise solutions.

Express – Solutions aimed at mid-market, but designed to grow with your business.

IBM Tivoli Provisioning Manager Express for Inventory

An affordable, entry-level solution to enable small and midsize organisations to collect, measure, store, and maintain hardware, software (including security patches), and asset information.

IBM Tivoli Provisioning Manager Express for Software Distribution

An easy to use inventory management and software distribution solution. It consists of all the capabilities included in IBM Tivoli Provisioning Manager Express for Inventory combined with the ability to leverage a company-wide distribution system for managing the delivery and updating of business software through a secure, Web-based interface.

Enterprise – World Class solutions implemented in many of the worlds largest organisations.

IBM Tivoli Configuration Manager

Enterprise scale Inventory management and software distribution solution. Enables rapid deployment of complex applications to multiple locations world wide from a central point, automatically scan and collect hardware and software configuration information from systems across your enterprise, introduce 'Desired State' management and enforce adherence to company policies.

IBM Tivoli Provisioning Manager

Focused on provisioning servers in the data centre, IBM Tivoli Provisioning Manager automates the provisioning and configuration of servers from bare-metal to active systems. It enables the installation and configuration of operating systems, applications, storage and network devices including switches, firewalls, and load balancers. Interfaces with Tivoli Intelligent Orchestrator to provision systems on-demand.
